SVILUPPATO DA
Università per Stranieri di Perugia

Teachers and students must complete the following registration procedure:

- Go to the website and click on "Register".
- Create a personal account
- Confirm the registration through the email received, using the link in the message to create your password.
- Log in using the credentials previously set.

After authentication you will be able to:

- Create new personalized learning scenarios
- Explore scenarios suggested by the University
- Monitor progress and badges
- Receive personalized feedback

The screenshot shows a dark blue rounded rectangle with a white 'AI Powered' badge in the top left corner. The main heading is 'Crea il tuo Scenario Ideale' in white. Below it, the text reads: 'Descrivi una situazione e l'IA genererà una lezione interattiva su misura per te.' At the bottom of the rectangle is a white button with a magic wand icon and the text 'Inizia la Magia'. Below the rectangle, the text 'Consigliati dall'Ateneo' is displayed. At the bottom of the page, there is a red circular icon with a white star and a plus sign, and the text 'Nessuno scenario raccomandato disponibile al m'.

2. Creating a learning scenario with AI

To create a new scenario:

Step 1 – Start

On the home page, click the "Start the Magic" button to open the scenario editor.

Step 2 – Language level selection

Choose the language level according to the Common European Framework of Reference:

- A1 (Beginner)
- A2 (Elementary)

Step 3 – Topic selection

You can choose between two generation modes:

a) Predefined topic

Select from the following categories:

- Cuisine
- Art
- Famous works of art
- Monuments
- Italian landscapes
- Famous people
- Cinema
- Fashion
- Travel
- Sport
- Technology
- Traditions and events
- Music
- News of the day

b) Enter a custom topic

The user can write a custom text prompt (also in their own language) and the AI will automatically generate an original story and activities consistent with the provided input.

Step 4 – Selection of communication modes

The user can customize the scenario by activating one or more of the following activities:

- Listening and comprehension
- Reading and comprehension
- Written production
- Oral production
- Grammar

3. Features of the generated scenario

a) Type of activities

Each scenario includes targeted exercises:

- Text-to-speech
- True/false and multiple choice questions
- Cloze test
- Written production with AI-based personalized feedback
- Oral production with voice recording and feedback

b) Evaluation and monitoring system

The platform offers:

- AI-based exercise evaluation
- Personalized feedback on grammar, vocabulary, and text coherence
- Continuous progress monitoring
- Dashboard with reports and badges
- Gamification features: Experience points (XP) and Badges
